NOVA SCOTIA'S ECONOMY PUMPED BY HIGH NATURAL GAS PRICES, SAYS RBC

TORONTO, October 8, 2008 — Like other energy-producing provinces, Nova Scotia's economy is enjoying the benefits of high energy prices and will see growth remain steady at around two per cent for 2008 and 2009, according to the latest provincial forecast released today by RBC.

“The positive effects of higher energy prices are manifesting themselves in many sectors of Nova Scotia's economy,” said Craig Wright, senior vice-president and chief economist, RBC. “Manufacturing shipments have posted double-digit gains, energy exports continue to offset drops in other export commodities, and the higher incomes resulting from the positive terms of trade are boosting consumer spending.”

According to the report, while natural gas prices have moderated going into the second half of 2008, they are expected to remain at historically high levels through 2009. This will keep work related to the Deep Panuke offshore gas project on track and support increased investment spending.

The recent improvement in the terms of trade will continue to play out next year, further stimulating domestic spending. However, for growth to remain steady in 2009, some spending on two new multi-year projects — the Keltic Petrochemical plant and Maple LNG terminal — must get underway.

The outlook for provinces has generally darkened as a result of the recent dramatic turn in the year-long financial market crisis. The U.S. economy now appears to be in recession with Europe, the U.K. and Japan also sinking fast. While Canada is in better position with its financial sector less heavily impaired, overall growth will be substantially weaker than previously anticipated.

Among the provinces, Saskatchewan will lead the way this year and next in terms of economic growth, with Manitoba closely behind. The Atlantic region is expected to display continued resilience and should sustain a moderate pace of expansion for the most part. Conditions in the most western part of the country are on a deteriorating path. Eroding housing situations and rapidly slowing growth in consumer spending have prompted downward revisions to the forecasts for British Columbia and Alberta. With weak external trade continuing to exert a toll, cracks have appeared in the domestic foundations of Ontario and Quebec. Ontario will likely see its growth evaporate.

The RBC Economics Provincial Outlook assesses the provinces according to economic growth, employment growth, unemployment rates, personal income growth, retail sales, housing starts, and the Consumer Price Index.

According to the report (available online as of 8 a.m. E.D.T., at www.rbc.com/economics/market/pdf/provfcst.pdf), provincial forecast details are as follows:

	Real GDP			Housing starts			Retail sales			Employment			CPI		
	<u>07</u>	<u>08</u>	<u>09</u>	Thousands						<u>07</u>	<u>08</u>	<u>09</u>	<u>07</u>	<u>08</u>	<u>09</u>
