MANUFACTURING SECTOR WEAKENS QUEBEC'S ECONOMIC GROWTH

MONTREAL, January 11, 2008 — While Quebec's economic growth is expected to drop to just under two per cent in 2008, it should grow marginally faster than Ontario's, according to the latest provincial economic outlook released today by RBC.

"Since the Quebec economy shares similar challenges to those of Ontario and its manufacturing sector, it is also feeling pressure from the strong Canadian dollar and weaker U.S. market," said Craig Wright, senior vice-president and chief economist, RBC. "However, the province remains partially insulated due to its different mix of manufacturing activity, which is significantly driven by sectors like aviation and biotech. With no auto assembly plants and less direct exposure to the most challenged U.S. industries, Quebec's economy may face fewer downside risks to growth than its western neighbour."

The report notes that the risks to manufacturers and manufacturing jobs in central Canada are similar to the ones faced by most of the industrialized world. In order to strengthen Quebec's economy, a greater number of market-friendly policy measures are necessary to ease employment transitions as workers shift across industries, and to provide a more competitive tax, regulatory, and investment landscape.

Quebec's housing market may also continue to operate at fairly elevated levels since the release of pent-up demand started slightly later than other regions across the country. Further support may well come from \$950 million in new tax cuts this year.

Across Canada, Alberta leads all provinces with above-average economic growth, followed by Saskatchewan and Nova Scotia. On the opposite end of the scale, and showing a complete turnabout with its mega-projects now in maturation, Newfoundland and Labrador is posting the slowest economic growth rate of 0.5 per cent, and on its heels is P.E.I., as well as Quebec and Ontario with its manufacturing woes. However, a more bullish outlook is in store by the end of this decade for Newfoundland and Labrador, New Brunswick, Nova Scotia, and in particular Saskatchewan where there is a possibility for a triple play of diamond mining, rich uranium deposits and a massive oil strike in the southeastern part of the province.
