## **SASKATCHEWAN – THE NEW PROVINCIAL GROWTH LEADER: RBC REPORTS**

**TORONTO, April 3, 2008** — Saskatchewan is expected to be Canada's economic growth leader, coming in at 3.6 per cent in 2008 and 3.2 per cent in 2009, benefitting from strength in energy, mining and agriculture sector, according to the latest provincial economic outlook released today by RBC.

“The province now ranks number one across all key housing indicators that we track,” said Craig Wright, senior vice-president and chief economist, RBC. “Saskatchewan and Manitoba have become the new ‘it’ provinces with hot housing markets, big capital spending plans, and tight labour conditions.”

Saskatchewan will be also be the only province to see an increase in new home construction in 2008, as it continues to benefit from an in-migration surge. While interprovincial migration has contributed to an overvalued housing market, it is likely only a matter of months before a decelerating trend sets in to bring markets back in line with underlying fundamentals. The cool down is likely to be similar to what is currently going on in Alberta.

On the business side, however, Saskatchewan has more upside potential than Alberta, as it benefits from strong export volumes and high prices for oil, uranium, potash and grains. The province's unemployment rate of four per cent is at its lowest rate in 25 years and skilled labour shortages are a growing concern. These labour shortages are supporting the fastest wage growth in the country.

The growth gap between the commodity-rich Western provinces and manufacturing-heavy Central Canada is expected to persist in 2008. Across Canada, Saskatchewan is expected to be the top growth performer this year as its economy benefits from strength in energy, mining, and agriculture sectors. Conversely, Newfoundland and Labrador should be the laggard as waning oil production weighs on its growth. The strong Canadian dollar and softer U.S. demand for exports continue to weaken manufacturing sectors across the country. Ontario's weak trade sector will see the province teeter on the brink of recession through 2008, but it should pick-up in 2009 to coincide with a recovering U.S. economy.
