

## Perils of public WiFi

Fade up on exterior shot of Rainforest Café-style restaurant called Lost Island Café.

**SERVER**

*Welcome to Lost Island Café, a jungle paradise...*

**SERVER**

*... where we invite you to explore our wild menu options.*

**KEVIN**

*Uh... Can I get a ... Big Beast Burger?*

**SERVER**

*Teeth or no teeth?*

**KEVIN**

*Huh?*

**ZHANG**

*Beef or veggie.*

**KEVIN**

*Oh, uh, veggie, please.*

**SERVER**

*Suit yourself.*

**ZHANG**

*And can I get a Snakebite Salad with Balsamic Venom?*

**SERVER**

*Your orders will be out shortly. Be careful of the volcano.  
It's hot.*

**KEVIN**

*Huh? ... oh.*

**ZHANG**

*Isn't this place great? So authentic. And just like the real  
jungle, it has free Wi-Fi. I'm going to squeeze in a little  
online banking if you don't mind. Using Safari. You get it?  
Safa--*

**KEVIN**

*Hold on, Zhang. Just like the real jungle, this place could  
be full of snakes.*

**KEVIN**

*Ah-ah! The hacking kind, I mean.*

“Free WiFi” “Web Site” “Credit Card.”

**KEVIN**

*Most public connections are either unsecured or have shared passwords – easy targets for hackers that can insert themselves between you and the websites you visit and see all your personal information.*

**ZHANG**

*Really? How?*

As Kevin speaks, we cut to infographic-style animations of the Lost Island Café being duplicated as an evil twin to which a mobile phone user points his device. One says “Lost Island Wifi” and the other says “Lost Island Guest.”

**KEVIN**

*Well, there’s the Evil Twin attack – where hackers set up legitimate-looking Wi-Fi connections with network names that are similar to the real ones. Unsuspecting victims will connect to the evil twin that receives everything they input, including personal information and passwords.*

**ZHANG**

*Wow, talk about Lost? What do I do?*

**KEVIN**

*Well, make sure you have the REAL network name before you connect. Check for signs or ask staff.*

Shot of Zhang’s phone’s screen with the following terms:

Settings  
WiFi  
Choose a network  
Other...  
Forget this network

**ZHANG**

*Ok, got it! What else?*

**KEVIN**

*Once you're done – forget that network! Otherwise your phone will send off signals looking for it which can be intercepted by hackers.*

**ZHANG**

*OK, so only use networks I know are legit and immediately tell my phone to forget that network. Now is it safe to do online banking?*

**KEVIN**

*Eh... No. You're still vulnerable to the Man In The Middle attack – where hackers watch or tweak your data in transit. They can intercept and alter your communications.*

**ZHANG**

*Wow. The jungle theme is feeling alarmingly à propos right now.*

**KEVIN**

*Yeah, honestly, just don't buy stuff or bank online on public Wi-Fi. Use your phone's cell data instead. Because you never know what--*

**ZHANG & KEVIN**

*Whoa!*

**ZHANG**

*Talk about an int-eruption! What's happening?*

**ZHANG & KEVIN**

*Oh! Come on...*

**SERVER**

*Your orders are ready!*

*END.*
